

Intersurgical EcoLite™ adult high concentration oxygen mask

The lightest and most comfortable mask available

Oxygen and Aerosol Therapy • Oxygen Therapy

Intersurgical **EcoLite™** adult high concentration oxygen mask

Welcome to the Comfort Zone

We are pleased to announce the arrival of the next generation of Eco masks. The original Eco oxygen masks have been an outstanding success with high volumes sold around the world.

The chin section of the mask has been extended and two integral seals ensure that the mask fits a wider range of face shapes.

A unique valve system combines exhalation and safety valve functions in one design.

The lightest and most comfortable mask in the world just become even more comfortable!

Comfortable for the patient

A soft, thermoplastic elastomeric, face seal ensures a greater level of patient comfort.

An incurved nose seal designed to prevent oxygen entering the patient's eyes. This eliminates the need for a separate metal nose clip making the product MRI compatible.

The unique nose seal is designed to equalise the pressure exerted on the nose as the seal conforms to differing nose shapes.

These design features combine to provide an improved seal on the patient's face, which in turn, results in higher oxygen concentrations as less ambient air enters the mask.

The mask retaining elastic can be fitted either above or below the patient's ears depending on the patient's face shape. In the "below ear" position it eliminates the discomfort and longer-term trauma created by elastic to the top of the patient's ears.

A choice of "under chin" or "on chin" positions provides a better fit on a wider range of patient face shapes.

Low resistance safety valves allow the patient to breathe room air should the oxygen supply fail or be inadequate to meet peak flow requirements.

The material forming the body of the mask is clear, permitting visualisation of the patient's nose and lips. It is also rigid enough to maintain the mask's shape during transportation and use.

Incurved nose seal

Conforms to different nose shapes designed to prevent oxygen entering patient's eyes

No metal nose clip

MRI compatible

Two integrated safety valves

Allows patient to breathe room air in the event oxygen supply failure

Soft face seals

Increased patient comfort

Elastic can be positioned under or over the ears

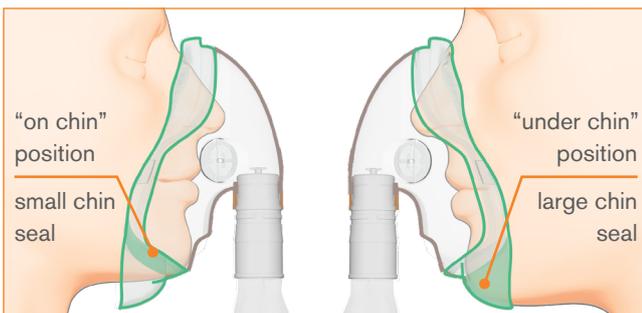

Below ear position eliminates trauma to top of ears

A choice of "under chin" or "on chin" positions

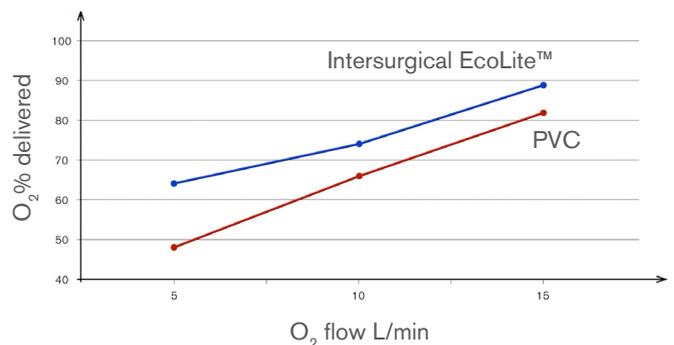

Provides a better fit on a wider range of patient face shapes

Improved sealing

Higher oxygen concentrations

Intersurgical EcoLite™ compared to PVC high concentration masks

Comfortable for the environment

Various groups have questioned the use of PVC in medical products and it's impact on the environment. Intersurgical's aim is to reduce the environmental impact of its products and processes. The utilisation of new materials and the latest manufacturing technology has resulted in the elimination of PVC from the mask shell resulting in a reduced environmental impact.
