

# EXAMINATION TABLE PREMIUM, ELECTRIC

ART NO: 4-915

*We offer the broadest range of examination tables available on the market; from simple standard tables to models with electric height and back adjustment and flexible adaptation based entirely on what you require. We have also developed special tables for ultrasound examinations of the heart, for example. All our examination tables move straight up and down when their height is adjusted, which means they can be placed against a wall. We use top quality castors so that our tables move easily and are easy to manoeuvre. Custom accessories and a wide range of upholstery colours give you plenty of freedom of choice.*

## ELECTRIC PREMIUM EXAMINATION TABLE WITH EXTRA LOW HEIGHT

Our bestseller, with its extra low height, centrally locked castors, electric back and protective strips as standard, has everything you need for a smooth use. The stability contributes to a safe and secure examination, no matter how the patient is lying or sitting on the table.

The electric height adjustment is made straight up and straight down, which means that the table can be placed against a wall. The height is well increased both in the lowest and highest position. This means easier entry and exit for the patient, while always getting a good working posture. The back is also adjusted electrically, which means that you always have your hands free.

Examination table Premium is equipped with centrally locked castors. Oscar central locking gives you three different modes; all castors braked, all castors released or two wheels released and two castors locked to a single direction. Centrally locked castors are preferable if the stretcher has to be moved a lot, and it also makes things easier when replacing the roll of paper if the table is pushed up against the wall.

Easy to move into the shock position. Choose from 14 different colors of upholstery.

Optional extras include breathing holes and side rails.
