

Mini-Plasco® basic & Mini-Plasco® connect

Designed for convenient handling

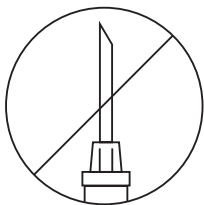

Benefits of the product design

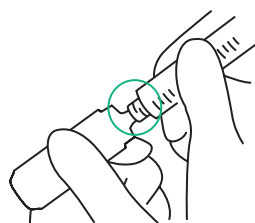

Reduced risk of touch contamination
The ergonomic grip plate with an integrated finger stopper enables a secure grip and reduces the risk of touch contamination of the Luer connection.

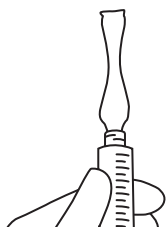

Worry-free opening
Easy and particle-free opening process virtually eliminates any cuts and scratches.

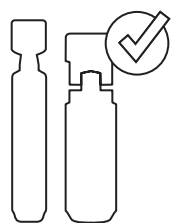

Needle-free usage
Direct Luer Lock and Luer Slip syringe connection avoids the need to use a needle for fluid withdrawal. This results in a quicker handling process, less components and no risk of needlestick injuries.

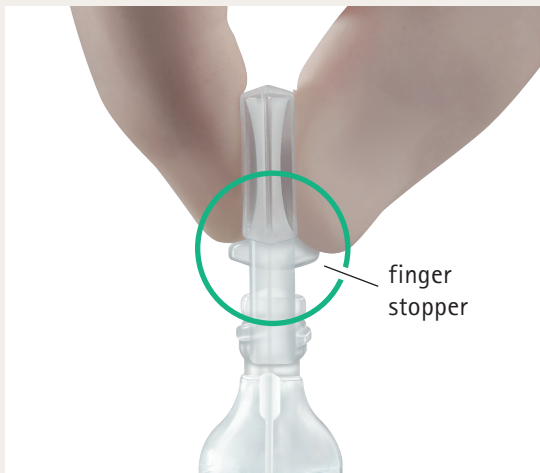

Easy syringe connection
Simply insert tightly Luer Slip or Luer Lock syringe and ensure clean handling procedures.

Time-saving withdrawal
The ampoules collapse during withdrawal, therefore the fluid can be aspirated in one single step. This improves the time needed to withdraw. Exposure of the solution to environmental air is reduced.

Easy to handle
Virtually unbreakable for worry-free transport, storage and handling: focusing on what matters – providing excellent care, without the stress of product fragility.
